Goddard's Granite & Marble Liquid Polish
www.goddards.com

*An IceStone Certified Fabricator should apply this product.

RESEALING GUIDELINES

IT'S TIME TO RESEAL YOUR ICESTONE DURABLE SURFACE IF:

- » Water absorbs into the surface
- » You have just removed a stain

To reseal IceStone, make sure the surface is dry and clean. Apply any one of our recommended sealers and follow the manufacturer's instructions. IceStone strongly suggests applying at least two coats of sealer to the surface.

THANK YOU

As the owner of an IceStone product, you are diverting glass from landfills and oceans. You are supporting American manufacturing, corporate social responsibility, and you are investing in a surface that is Cradle to Cradle™ Gold certified.

Please contact us to learn more about IceStone's mission, certifications, and products.

WELCOME

At IceStone, we strive to create beautiful products that last. We believe that high design must include respect for people and the planet, and we keep our triple bottom line mission in mind with each slab we produce.

To ensure your IceStone durable surface maintains its luster and beauty, it is necessary that you follow the care and maintenance practices listed in this brochure.

ABOUT YOUR ICESTONE SURFACE

IceStone is a manufactured high performance concrete surface composed of cement and recycled glass. Due to the fact that IceStone has a cement matrix, it is porous by nature, and can be susceptible to etching and staining.* IceStone requires the application of a penetrating sealer in order to prevent the absorption of liquid stains. Acids can etch the cement in IceStone so the application of a topical concrete wax is strongly recommended.

*Some popular products that may adversely affect IceStone are coffee, wine, colas, citric juices, oil and vinegar based products, harsh chemicals, bleach, ammonia, and/or acid based cleaning products.

CARE TIPS

- » IceStone should be sealed twice a year and waxed three times a year, according to the manufacturer's recommended application
- » Quickly wipe up spills – especially acidic liquids like coffee, wine, fruit juices, and vinegar – with hot water
- » Use an all purpose cleaner for daily care: we recommend several products with a pH between 7 and 10
- » Avoid cleaning products such as Windex, Brillo, Ajax, Formula 409, chlorine bleach, Spic n' Span, or similar products. These may contain ammonia or acids that can cause etching
- » Use trivets under hot pans and pots; heat may compromise the sealer
- » Use cutting boards to protect the surface and prevent dulling of knives

HOW TO REMOVE STAINS

TO REMOVE SURFACE STAINS:

- » Use a damp cloth to wet the surface with non-chlorine bleach (we recommend Seventh Generation non-chlorine bleach)
- » Leave the saturated cloth on the surface until stain clears, which can take 15 minutes to 7 hours, depending on the severity of the stain
- » After the stain is removed, reseal the surface

Call your Certified IceStone Fabricator or call IceStone directly so we can help you resolve the issue.
